

ROXELLE NIGERIA LTD.

Summary Report On Roxelle Nigeria Ltd

Prepared by: Ishola Mayowa John | Tool: Microsoft Power BI | Period: 2023 – 2024

1. Company Background

Roxelle Nigeria Ltd. is a mid-size Fast-Moving Consumer Goods (FMCG) retail chain operating six store branches across Lagos and Abuja. The company sells products across three core categories: Food & Beverages, Personal Care, and Household Essentials. All branches have gathered transactional and operational data over the last 18 months. This report presents a structured analysis of the data, covering sales performance, customer behavior, product health, and discount effectiveness.

2. Key Performance Indicators

The Power BI analysis's headline numbers for each of the six branches and the two trading years are in the table below.

KPI	Value	KPI	Value
Total Revenue	N76.07M	Total Transactions	5,000
Total Profit	N23.15M	Return Rate	10.68%
Profit Margin	30.43%	Avg Basket Size	N15,214
YoY Growth	100.77%	Revenue Lost to Discount	N2.15M

A profit of N23.15M and an overall profit margin of 30.43% was generated from the total revenue of N76.07M recorded across 5,000 transactions. For an FMCG store, these numbers are good. Revenue increased by 100.77% year over year, however this should be read carefully because 2023 might just be a partial trading year rather than a complete 12-month period.

3. Sales Performance

Across all six branches, Surulere generated the highest total revenue, making it the strongest performing branch in terms of sales volume. However, Ikeja recorded the highest profit margin, meaning it operates more efficiently generating more profit per naira of revenue. This difference is important because a branch can appear to perform well on revenue while quietly giving up margin through excessive discounting or high operating costs.

Key findings from the Sales Performance analysis:

- Surulere Branch leads all branches in total revenue generated.
- Ikeja Branch leads all branches in profit margin efficiency.
- Monthly revenue trends reveal clear seasonal patterns that management can use to plan stock and staffing.
- Year-over-year revenue grew by 100.77% from 2023 to 2024, reflecting strong business growth.

4. Customer Behavior

Roxelle has over 1,200 customer records across four segments which are Regular, Loyal, Occasional, and New. The analysis reveals that Regular customers contribute the most revenue, making them the most commercially significant group. Lagos is the most active city by transaction volume, which aligns with Roxelle's strongest branch concentration in Lagos.

Key findings from the Customer Behavior analysis:

- Regular customers generate the highest revenue across all segments.
- Loyalty cardholders spend more per transaction than non-holders, confirming the program's value.
- Male customers are the leading revenue generating gender.
- The 36-45 age group is Roxelle's most valuable demographic by revenue contribution.
- Lagos is the most active city by number of transactions.

5. Product & Inventory Health

Roxelle carries 60 products across three categories. The analysis clearly identifies the winners and underperformers within the product portfolio. The particular concern is the overall return rate of 10.68%, which confirms the company's suspicion that returns are running at an unacceptable level. At the product level, Indomie Noodles recorded the highest return rate of any SKU in the portfolio.

Key findings from the Product & Inventory Health analysis:

- The overall product return rate stands at 10.68% above the acceptable threshold for FMCG retail.
- Indomie Noodles has the highest individual product return rate and requires urgent supplier and quality review.
- The matrix analysis of profit by category and sub-category reveals which product lines are carrying the business and which are underperforming.
- Certain products are consistently approaching or falling below their reorder levels, creating potential stock out risk.

6. Discount & Promotions Audit

Roxelle lost N2.15M in revenue through discounting across the 18-month period. Inconsistent Discounts was applied across branches, with no clear evidence that heavier discounting was always associated with proportionally higher sales volumes. POS identified as the payment method most commonly associated with discounted transactions, suggesting that discount approval in store are where the most margin is being given away.

Key findings from the Discount & Promotions Audit:

- N2.15M in revenue was sacrificed through discounts across all branches.
- Discount rates was applied in tiers of 0%, 5%, 10%, 15%, and 20% but not consistently across branches.
- POS payments are the most common channel for discounted transactions.
- There is no strong evidence that higher discount levels consistently produce larger basket sizes across all branches.

7. Recommendations

Based on the analysis, the following actions are being recommended for Roxelle management:

Area	Recommendation	Priority
Returns Management	Indomie Noodles recorded the highest return rate. Quality checks and supplier review are really needed.	High
Loyalty Program	Loyalty cardholders spend more per visit than non - holders. Expanding enrolment will drive revenue growth.	High
Discount Controls	N2.15M was lost to discounts with POS being the most discounted channel. Branch-level approval limits should be introduced.	Medium
Customer Targeting	Male customers aged 36-45 are the highest revenue group. Marketing should reflect on this.	Medium
Branch Strategy	Surulere leads in revenue while Ikeja leads in profit margin. Ikeja's cost model should be looked into and replicated.	High

8. Conclusion

This analysis gives Roxelle Nigeria Ltd. its first structured, data-driven view of business performance across all six branches. The findings confirm several concerns that management previously had no evidence to act on particularly around product returns, discount spending, and branch-level profitability differences. The Power BI dashboard built alongside this report enables management to monitor these metrics on an ongoing basis, filter by branch, category, and date, and make faster, more confident decisions without relying on manually updated spreadsheets.

When the following suggestions especially those concerning discount controls, loyalty program expansion, and returns management are implemented appropriately. Roxelle is in a good position to improve its profit margin and sustain the strong revenue growth recorded in 2024.
